

CHATBOT CHARLIE

The World's First Travel
Safety Chatbot

How Can A Chatbot Keep You Safe?

Chatbots are becoming a central feature for many businesses, but how we can leverage advances in Chatbot technology to help keep people safe?

That's why we developed Chatbot Charlie – the world's first Travel Safety Chatbot. Chatbot Charlie takes all of the Travel Safety expertise we have at our disposal, and turns that data into insight, and enables you and your people to turn that insight into action. We believe that Chatbot Charlie is going to change the way we learn to stay safe, forever.

True On-Demand Learning

When most people are looking for training, they are often actually asking a question. For example, "Is it safe to travel to Brazil?" or "What do I need to know about travelling when pregnant?". Charlie has been designed to allow your travellers to simply ask the question and get clear, concise advice and videos on the subject.

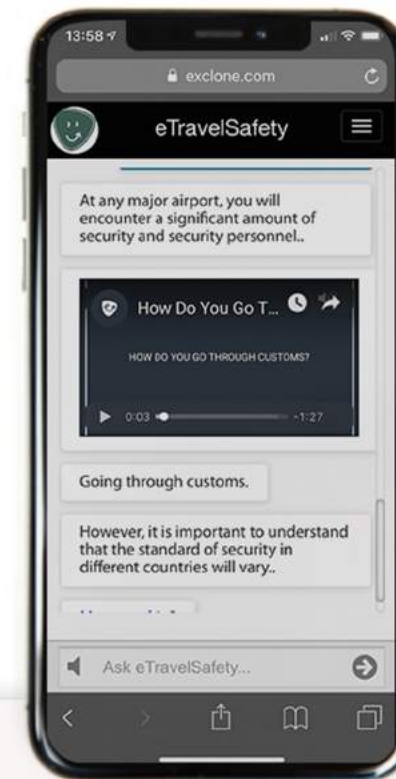

Country-Specific Information

Whilst Charlie is packed with Travel Safety advice, Charlie also has access to the live risk ratings of every country in the world. He can then tell you how to stay safe in that specific country. All you need to do? Just ask.

Powerful AI

Charlie is clever, but he is getting cleverer all the time. In fact, the more we ask of him, the more he learns. Our clever, self-learning algorithms are constantly looking to improve the answers Charlie gives back by monitoring conversation 'flow' and customer happiness.

Real-Time Alerts

Chatbot Charlie is able to leverage a whole host of enhanced data to provide you with on-demand, real-time alerts for your destination. From bomb scares to riots to planned demonstrations, Chatbot Charlie knows everything that's going, and is on hand to let you know how you can stay safe.

So What Does It Cost?

Want to use Charlie in your organisation? Get in touch with us today to get a tailored quote based on your specific requirements.
